CATS provides individualized treatment to children who have symptoms within the Autism Spectrum, including:

- Autism
- PDD-NOS
- Asperger's Disorder
- Rett's Disorder
- Childhood Disintegrative Disorder

Autism Spectrum Disorders

The Autism Society of America estimates that one child in 150 is born with Autism. With an annual growth rate of 10-17%, this indicates an alarming number of our children affected by this syndrome. With early diagnosis and treatment, as many as 50% of these children can enter the mainstream, while the other 50% can make great strides.
